

Soundboard installation guide

Required technologies to run

- `dotnet`
 - version 6.0
- `sqlite`
 - used for local database
- `ffmpeg`
 - used for file format conversions when downloading sounds from YouTube
- `mpg123`
 - used for playing .mp3 files
- `dotnet ef`
 - used for applying migrations
 - installed with `dotnet tool install --global dotnet-ef`

Everything else is provided in-app with NuGet packages, requiring no further manual installs.

How to run

```
cd PV178Soundboard      # change to project directory if not already in it
dotnet ef database update # create DB and apply migrations
dotnet build             # build the app
dotnet run               # run the app
```
